Admin Overview

Organization Admin controls the workspace setup. Admin manages users, departments, workflows, policies, organization settings, reports, and audit visibility.

Admin responsibilities

• Create and maintain organization users.

• Assign roles and departments.

• Create departments and department heads.

• Build approval workflows and workflow steps.

• Configure policies for amount/category/risk based routing.

• Monitor requests, audit logs, reports, and dashboard analytics.

• Manage SMTP/email notification settings if enabled.

How to Add and Manage Users

1. Go to Users from sidebar.

2. Click Create User.

3. Enter name, username/email, role, department, designation, phone, and password details.

4. Save user.

5. Use Edit to update role/department.

6. Use Activate/Deactivate for access control.

7. Use reset password flow when needed.

Role selection guide

Role	When to assign
ORG_ADMIN	Workspace owner/admin who manages all organization setup.
DEPARTMENT_HEAD	Head of a department and department-level approver.
STAFF	Normal request creator.
APPROVER	Dedicated approval authority.
AUDITOR	Compliance/reporting user with view access.

Important

• Do not give ORG_ADMIN role to every user.

• Deactivate users who leave organization.

• Always assign correct department for department-based approval.

How to Add Departments

1. Go to Departments.

2. Click Create Department.

3. Enter department name and description.

4. Select Department Head from active organization users.

5. Keep Active enabled.

6. Save department.

Department usage

• Requests are created under departments.

• Department heads can be assigned automatically in workflow steps.

• Reports can be filtered department-wise.

• User visibility can be scoped by department role.

Workflow Setup Manual

A workflow is a reusable approval template. Each workflow contains ordered steps. When a request is submitted, these template steps generate actual ApprovalStep records.

1. Go to Workflows.

2. Click Create Workflow.

3. Enter workflow name, category, and description.

4. Save workflow.

5. Open workflow detail.

6. Click Add Step.

7. Set step order, required role, fixed approver or department-based assignment, SLA hours, and final step flag.

8. Repeat for all levels.

Recommended workflow examples

Workflow	Step Example
Vendor Payment	Step 1 Department Head, Step 2 Finance Approver, Step 3 Organization Admin final.
Leave Approval	Step 1 Department Head final.
Contract Approval	Step 1 Department Head, Step 2 Legal Approver, Step 3 Org Admin final.
Purchase Approval	Step 1 Department Head, Step 2 Purchase Approver final.

Policy and Rules Engine Setup

Approval policies help automatically select workflow, update priority, and assign a fixed first approver based on category, amount, risk, or priority.

1. Go to Approval Policies.

2. Click Create Policy.

3. Set condition fields such as category, min amount, max amount, risk level, or priority.

4. Set action fields such as Assign Workflow, Set Priority, or Fixed Approver.

5. Set lower Policy Order for rules that should run first.

6. Save policy and keep it active.

Example policies

• Vendor Payment above Rs. 100000 -> Senior Vendor Workflow + High priority.

• Contract category -> Legal Contract Workflow.

• High risk documents -> Urgent priority + senior approver.

• Purchase below Rs. 10000 -> Simple purchase approval.

Admin Monitoring and Audit Logs

Audit logs record important actions such as request creation, update, submit, approve, reject, upload, delete, replacement, OCR correction, and policy changes.

1. Go to Audit Logs.

2. Use search filters by action, model, object ID, user, organization, or IP.

3. Open audit detail to see message, user agent, extra metadata, and timestamp.

Admin checklist

• Review pending requests regularly.

• Check failed OCR/AI processing.

• Monitor overdue approval steps.

• Check reminder history and escalation logs.

• Review users and inactive accounts monthly.
